

malware attack resolved!

Thanks to everyone who showed concern when the Vertical Blue site was listed as being infected with badware. It looks like a malicious Chinese site somehow created a link within our site which would take your computer there without your knowing it...

Anyway the problem is resolved now, and we will be working to update the website soon with new pictures, videos, course dates and more.

Pleasant diving to everyone!

William Trubridge.

Great you solved the problem. It is a good thing google notified that the site might upload malware. I was looking forward to read more new blog items, now you are able again I hope to do so soon ;) You are a great inspiration. Thanks!
